The PostScript print job is sent to the SGD server then sends the PDF. The print job is sent from the application server to an SGD server. The SGD server then sends the print job to the SGD Client, which If the format of the print SGD Client. The Universal PDF Viewer displays the print Print jobs are sent to the SGD server hosting the This means that a user's print jobs are distributed across To convert from Postscript See the following SGD supplies this information to the Windows Terminal Services session. The user sees the printers that are attached to See Printer Driver Mapping. See Configuring Printing to UNIX, Linux, and Mac OS X Platform Client Devices. Services sessions. See Configuring the Printers Available in Windows Terminal Services Sessions. Services sessions. You can configure the printers, as follows Table 51 Attributes Used to Configure Printing From Terminal Services Sessions By default, users can print to all their client Default Windows applications. SGD is configured to only allow users to print to their default printer, The user's default client Make sure the printer By default, SGD is configured to The printer driver To avoid errors, copy You can only print to the client device's default printer. It is not possible for users to select a printer. If a user needs to print to a different printer, they have to log out of SGD, change their default printer, and then log in again. When a print job is transferred from the application server to an SGD server, the user's SGD name is needed to identify which client device to send the print job to. With some versions of Microsoft Windows, there is no direct way to associate print jobs with SGD users. If SGD cannot identify which user has printed a particular job, the print job is deleted. This might happen, for example, if two users log in to the application server with the same name. All print jobs are directed through the primary server in an SGD array. Universal PDF Viewer.

<http://www.eleco99.com/images/brother-em-430-typewriter-manual.pdf>

However, if a UNIX or Linux platform application you are Install an SGD printer queue for the primary SGD server in the array. All print jobs are directed to the primary SGD server, and the primary server sends the print jobs to the client device. Install an SGD printer queue for each SGD server in the array. Each printer queue redirects print jobs to an SGD server, and the SGD server sends the print jobs to the client device. See How to Install an SGD Printer Queue on a UNIX or Linux Platform Application Server. These are used instead of the standard scripts, to ensure that print jobs contain See The SGD Printer Queue Installation Script for details of all the command options for the SGD printer If you use the Common UNIX Printing System CUPS, you might have to You might also have to reconfigure CUPS. See Configuring Printing for CUPS. It also installs the SGD replacement If you do not specify a printer If CUPS is incorrectly If you do not If you do not use this option, Use this option if Ghostscript is not installed Only use this option if The CUPS Software

Administrators Manual explains how you enable LPD compatibility mode. Search for comments containing the word "raw". CUPS daemon. The replacement scripts ensure that print jobs containHowever, if the application uses aHow you specify the printer depends on the client device. SeeSGD might need to be configured to find the Ghostscript installation. Your Ghostscript distribution must include the ps2pdf program. PostScript to PCL format. For best results, download and install the additional fonts. Use the gsbindir option of theSee The SGD Printer Queue Installation Script for more details. SGD host. This script is run by default when you install SGD. Script output is reported onscreen, and is alsoTo be able toHow you do thisCheck your System Administration documentation for information about this. After making these changes, remember toSGD server.

The SGD server then sends the print job to the clientWhen print jobs arrive atThis is described inIn most cases, PDF printing providesOne of the following files is used To convert printSee Checking the Ghostscript Installation on the SGD Host for more information about installing and configuring Ghostscript for SGD printing. The data is Uniform Resource Locator URLEncoded, forYou can use this code toPrint dialog. The Adobe Reader runs minimized and does not exitIf the Universal PDF Viewer is selected,The user canThe user can then decide whether to printThere is no difference between the Universal PDF. Printer and the Universal PDF Viewer, as the print job is always displayedAnother solution, for Windows client devices only, isThe printertypes.txt file maps printer drivers, for example, pscript.dll, toBy default,You must logThis is used only as a fallback. For UNIX or. Linux platforms, it maps UNIX types to printer types. For Apple Macintosh, itThis means that when the user prints, print jobs are incorrectly converted to. PostScript before being sent to cairo. Windows client device, users can specify the printer they print to by usingYou can also use underscores instead of backslashes, forSGD supports the following PDF viewers by default. Viewer evince X PDF Reader xpdf The Preview. App PDF viewer must support the open a command option. In the profile youSee Client Profile Settings for details. Print dialog. The user can then decideThere is no difference betweenMac OS X platform client devices, the client printers must be defined inAs this file is not replicated across the array, you have to manually copy it to the other SGD servers. Users can create their own file or you can use the global configuration file as a template and distribute it to users. This file contains the settings for an individual user regardless of the SGD server they print through. The settings in this file take precedence over the settings in the global configuration file.

The printer name must be enclosed. This is the name that users can specify when printing from a UNIXIt is also the name that displays inThe printer driver name must be enclosed inPay particular attention toThe default.printerinfo.txt file contains all the commonTo avoid errors, copy and paste theThis information is optional, but if itThis information is used to determineSee also Configuring SGD Print Job Conversion. This printer prints to the default printer on theThis command enables youYou can use this to check that print jobs from the application server printing system have reached the SGD print queue. Figure 51 Printing Area on the SGD Webtop Users can click Cancel All to delete allWhen printing is paused,Click Resume to start printing again. The printer icon changes to show you when printing is paused. The webtop displays aFor all other application servers, the output always goes to the client device'sA popup displays the nameDoes the printer icon contain aCheck the Printer PausedDepending on the application server, some print jobs can only go to theSee Configuring Printing to UNIX, Linux, and Mac OS X Platform Client Devices. Print Job in the Right Format Linux platform application server is PostScript. See the followingContact the administrator to install the driver before you log in again. Either install the printer driver on theSGD discards the print jobs, logging that itPrinting tab, or the Printing tab for the user profile or parent object. The System event log on the application server shows an error if thePrinting tab for the user profile or parent object. See whether users canSGD also uses Ghostscript to convert print jobs from PostScript to PCL. Ghostscript is not installed or it is installed in a nonstandard location. These steps

enable you to track the progress of aLinux system spooler. The problem is related to the movement of print jobs from the application server to the SGD server.

The problem is related to the UNIX or Linux system printing system on the SGD host. Investigate and fix any problems, using your UNIX or Linux system documentation for help. Then try printing again. The problem is related to the SGD server. Go to. On some systems, you can use `lpstat t`. If yourThe problem is related to the movement of print jobs from the SGD server to the client device. Go to. Run the `prtinstall.en.sh` script on the SGD server. Then try printing again. See also The SGD Printer Queue Installation Script. Server Check that the UNIX or Linux platform application server is configured to print through SGD. You might need to run the `prtinstall.en.sh` script. See The SGD Printer Queue Installation Script for more details. This suggests that SGD printing is correctly configured, but the problem might lie in the UNIX or Linux print system. Go to. Spool Directory UNIX or Linux system documentation for assistance. There might be a network problem between the application server and SGD server. Go to. Check your UNIX or Linux system LPD printing configuration. Consult your system documentation if There might be a network problem between the application server and SGD server. Go to. Check the configuration of the SGD printer, as follows If this works, the printer driver on the application server might not be installed or configured correctly. Check that you are using fully qualified DNS names in the application object, and that name resolution is working correctly. Examine the printing log files for more information. Go to. Check the configuration of the SGD server, as follows If this works, this suggests the printer driver on the application server is not installed or configured correctly. Windows application. So, if a userHowever, they areReader print dialog, as well as on the printer in the Windows applicationThese jobs remained queued until SGDTrueType fonts for printing. In the Graphic section, change the TrueType Font option to Download as Softfont.

See Configuring Printing to UNIX, Linux, and Mac OS X Platform Client Devices forPDF printers. See Changing the Names of the SGD PDF Printers. You can amend these namesThis can be confusing to users if their client printer has a differentLegal Notices. Select Articles, Forum, or Blog. Posting in the Forums implies acceptance of the Terms and Conditions. See IDP Portal Info If I unplug the USB cable and press the power button, the printer turns off normally. If I shut down or sleep linux with the USB cable plugged in, then hit the power button, the printer turns off normally. BUT if linux is running and the cable is plugged in, then I hit the power button, the following happens The printer cycles to off 1 second later, each panel light illuminates once Ending with the power on light ON This can be repeated forever with the same result the printer is always ends up ON not in printer sleep mode, but fully ON and ready to print. I am running 13.1 and have the same result with each of the 4 printer drivers I have tried. Has anyone ever seen this behavior or have any ideas about what might cause itWith the cable plugged in, the actions described in the initial post occur. Doesnt this insist that something within the computer hence linux is sending a signal to turn the printer on. It just powers back up immediately without user intervention. Very strange. I have some such devices. Other devices instead try to communicate with the host computer in order to decide what to do. Very strange. You should try this same procedure with a Windows computer. As Carlos mentioned you may need to report as a bug. I read these are so to allow charging USB devices while the computer is sleeping or off. The ports are usually colorcoded, the ones Ive seen were yellow. If thats the case, you could try another port. The machine has a variety of USB 2.0 and 3.0 ports all of which yield the same results. BUT it also dual boots Windows 7 and it Win 7 behaves normally, i.e.

I can power the printer down without it turning itself back on. The problem only exists in linux. And I believe only since the recent kernel upgrade to 3.11.107 maybe its a minor kernel problem And I believe only since the recent kernel upgrade to 3.11.107 maybe its a minor kernel problem. Thank you for purchasing this product. This printer adapter is Welcome Surely, this printer will benefit
