Install CD introduction There are automobile failure diagnosis software, maintenance help documents and USB to RS232 driver in the CD. Please read the permissive agreement carefully, if you don't agree with the permission agreement, please click the Cancel button to quit installation; if you agree with the permission agreement, please select I agree with the permission agreement and click the next step to continue the installation. Click the next step button to show the end user's information interface, refer to the below drawing. Please input your information and click the Next step button to continue the installation, or click the Cancel button to quit the installation. Click the Next step button to show the installation folder interface, refer to the below drawing. 12 13 Please input or select the installation file path, and click the Next step to continue the installation or click the Cancel button to quit the installation. Click the Next step button to show the installation shortcut folder interface, refer to the below drawing; Click the Next step button to continue the installation or click Cancel to quit the installation. Click the Next step to show the ready installation interface, refer to the below drawing 13 14 CarBrain C168 Instruction Manual Click the Next step button to continue the installation or click Cancel to quit the installation. Click the Next step button to show the installation progress interface, refer to the below drawing If want to quit the installation, please click the Cancel button, or please wait for the successful installation interface, refer to the below drawing 14 15, Click the Finish button to finish the installation of automobile failure diagnosis system, and continue to install the USB to RS232 driver.

Install USB to RS232 driver automatically The installation procedure will install the USB to RS232 driver automatically after finishing the installation of automobile failure diagnosis software, refer to the below drawing OK Click the Confirm button to install USB to RS232 driver, refer to the below drawing Click Browse button to select the installation path for USB to RS232 driver, and click Cancel button to quit this installation or click Install to process the USB to RS232 driver. After a few minutes, the successful installation interface will be showed on 15 16 screen, refer to the below drawing CarBrain C168 Instruction Manual Click Confirm button to finish the installation of USB to RS232 driver, and continue to install the maintenance data. Installation complete After finishing the software installation, the below icon will be created in the Windows Desktop Registration C168 software is copyright software; only the user that has been authorized by our company can use this software. After register, users can use this software freely and without any limitation. Without our company's permission and authorization, please don't release or diffuse C168 software. The detailed register procedure is blow 1. Operate C168 software, and system will show the register interface automatically. 2. Input the equipment code in the equipment code column. 3. Input the register code in the register code column 4. Click the register button to register, and system will show register success of failure. In view of some notebook don't have RS232 jack, but almost all the PC and notebook computers have RS232 jack, so we use USB as the exterior jack, and RS232 as the interior communication mode. Then we need to install a dummy RS232 jack to complete the communication. So we install USB to RS232 driver to simulate RS232 jack.

Consideration of the convenience of USB jack, USB to RS232 can be connected to the peripheral equipment of the serial port RS232 and provide an easy communication environment, the transmitted speed is up to 12Mbps. The working theory is that after the installation of USB to RS232, it will simulate one serial COM port in your computer automatically. In general, the driver will allot the detailed COM number automatically. If there is no RS232 jack in your computer such as the newer notebook computer, then the driver will simulate one COM1 port automatically. This simulated COM port is same as the original COM port in computer for the applied software. If your applied software can select this simulated COM port, then the communication to RS232 will be come true. 1. Performance Communication between USB jack and serial port. Standard USB jack 4pin, and have symbol. 21 22 2. Check CarBrain C168 Instruction Manual If want to check the USB to

RS232 driver is installed successful or not, you just need to check whether there is dummy RS232 jack in your computer. Please follow the below steps to check Using main cable to connect the COMBOX or RFbox to your computer. If it exits, then the driver is installed successfully, if it doesn't exit, please refer to Step c. If X in COMx is number such as 1 2 3, then they are corresponding to COM1 COM2 and COM3, etc. Please check the connection between your computer and COMBOX or RFBox is OK or not, if it isn't fine, please correct it and return to Step b; if it is OK, then refer to Step d. Please check if Universal Serial Bus controllers appears Cygnal USB Composite Device or if other devices appears CP2102 USB to UART Bridge Controller like diagrams below please refer to 3. Installation. 3.

Installation Here below is the introduction of how to install USB to RS232 driver, taking Windows 2000 as the example After connecting COMBOX or RFBox to computer, please click the right key on the mouse, and follow the below steps Attribute Driver Update driver to select Update driver, then the guide interface of hardware installation will be displayed, refer to the below diagram 22 23, Click the Next step button, then the below drawing will be displayed. Select Searching the suitable driver for me, and click the Next step button, refer to the below drawing 23 24 CarBrain C168 Instruction Manual Select Specify a location, and click the Next step button, refer to the below drawing Select Browse under Copy manufacture's file from, find the directory of your USB to RS232.0 saved. Click Open to next step. Please click the Next step button, then the successful installation. Check the power led red is light or not, refer to COMBOX on page 7. Check USB to RS232 jack is working normally or not, refer to USB to RS232 on page 21. When it is under wireless communication, check the power led red and signal indicator are light or not, refer to RFBox on page System shows communicate unsuccessfully Here below are the reasons of such issue Whether the vehicle installed the computer control system or not. Whether the ignition switch is open or not. Whether the diagnosis adaptor is correct or not. Whether the communication equipment is normal. When it is under wireless communication, please check the signal indicator of main unit is light or not, if it is flickering or unlighted, then the signal is unstable or missing. Check the voltage of battery in vehicle, whether the voltage is too low. 25 26 26 If a serial version of the MonitorKey Programming The BTUpdater application is automatically installed Use the meter This driver is compatible with Windows XP Service Pack 2, Windows 2000 Service Pack 4, CONTENTS 1 BT Device Installation. 1 2 Printer Driver Installation.

The program is designed to configure the CarBrain C168 scanner, it allows you to analyze the data that the device has extracted from your car, allows to check and to update the firmware of the scanner device. Please add a comment explaining the reasoning behind your vote. This could happen for a several reasons, including no shared cipher suites. Additional troubleshooting information here. Please enable scripts and reload this page. Each year, thousands of young children are killed or injured in car crashes. Proper use of car safety seats helps keep children safe. But, because so many different seats are on the market, many parents find this overwhelming. If you are expectant parents, give yourselves enough time to learn how to properly install the car safety seat in your car, before your baby is born, to ensure a safe ride home from the hospital. The type of seat your child needs depends on several things, including your child's age, size, and developmental needs. Read on for more information from the American Academy of Pediatrics AAP about choosing the most appropriate car safety seat for your child. Most convertible seats have limits that will allow children to ride rear facing for 2 years or more. Many seats can accommodate children up to 65 pounds or more. Schoolaged children Booster All children whose weight or height exceeds the forwardfacing limit for their car safety seat should use a beltpositioning booster seat until the vehicle seat belt fits properly, typically when they have reached 4 feet 9 inches in height and are 8 to 12 years of age. All children younger than 13 years should ride in the back seat. All children younger than 13 years should ride in the back seat. LATCH is an attachment system for car safety seats. Lower anchors can be used instead of the seat belt to install the seat, and many parents find them easier to use in some cars.

The top tether improves safety provided by the seat and is important to use for all forward-facing seats, even those installed by using the vehicle seat belt. Although the seat belt and LATCH systems are equally safe, caregivers may prefer one system instead of the other. Keep in mind that only one system should be used unless the car safety seat and vehicle manufacturers say it is OK to use 2 systems at the same time. Vehicles with the LATCH system have lower anchors located in the back seat, where the seat cushions meet. Tether anchors are located behind the seat, either on the panel behind the seat in sedans or on the back of the seat, ceiling, or floor in most minivans, SUVs, hatchbacks. Nearly all passenger vehicles and all car safety seats made on or after September 1, 2002, are equipped to use LATCH. See vehicle owners manual for highest weight of child allowed to use top tether. All lower anchors are rated for a maximum weight of 65 pounds total weight includes car safety seat and child. Parents should check the car safety seat manufacturers recommendations for maximum weight a child can be to use lower anchors. New car safety seats have the maximum weight printed on their label. In most newer cars, you can lock the seat belt by pulling it all the way out and then allowing it to retract to keep the seat belt tight around the car safety seat. In addition, many car safety seats have builtin lockoffs so you can lock the belt without having to lock the seat belt separately as well. Refer to the vehicle owners manual for details about how your seat belt locks. If possible, it may be best for the child to ride in the middle of the back seat. However, it is sometimes difficult to install a car safety seat tightly in the middle if the vehicle seat is narrow or uneven. Also, many vehicles do not have lower anchors for the middle seating position.
