This may make it difficult for you to set the repeat portion exactly as you desire. When you are playing an instrument and performing the recording by yourself, it may be difficult to punch in or out using the button on the BR900CD. Recording automatically starts at the auto punchin location, so start playing what you want to record. This is called "bounce" also known as bounce recording or pingpong recording. In certain cases, this will reduce the number of incorrect detections. After the save has been completed, you are returned to the Pitch Correction patch selection screen. David Wills Makes All The Difference The manual for the BR900 looks like it should be easy enough to follow but for some reason just doesnt translate practically to using the device. David Wills covers a wide range of the BR900s capabilities and communicates them through easy to understand demonstrations. Whenever he demonstrates a function, the camera angle shifts to directly above the device so you can easily see the display and what buttons he is pushing. Even with a cursory vewing of the DVD, you will be able to create multiple track recordings with ease. The DVD is divided into sections for quick reference so touching up on more sophisticated functions like effects, copying tracks, mastering, burning a cd, and computer interface is a quick process. Best results will be achieved when stereo recording. This is used to extend the sustain of input sounds and, conversely, to shorten sustain and emphasize the attack portion of sounds. Another use of compression is as a "limiter," which prevents distortion by suppressing only volume peaks. Higher settings values result in longer sustain times. Set this to a lower value when using compression for the limiter effect. Larger values will result in a sharper attack, creating a more clearly defined sound. It is used to extend the sustain of input sounds and, conversely, to shorten sustain and emphasize the attack portion of sounds. The limiter is an effect that prevents distortion by suppressing input signals that exceed a set value threshold. You can get the same effect achieved with the compressor by setting the threshold at a low value.Larger values will result in a sharper attack, creating a more clearly defined sound. Higher values deepen the effect, resulting in a longer sustain. The compression effect is applied to input above the level set here. The smaller the value set here, the lower the level at which the limiter effect kicks in. Increasing the value will produce a deeper effect. Higher ratio create a stronger compression effect. The larger the value set here, the more rapidly compression is

applied.

The lower the values set, the more rapidly the compression is released, and the more clearly the sound from the next string played is heard.
