## Job Control Language

### MCQ

## 240 CORE JAVA INTERVIEW QUESTIONS AND ANSWERS

1) What are static blocks and static initializers in Java ?	9
2) How to call one constructor from the other constructor ?	9
3) What is method overriding in java ?	9
4) What is super keyword in java ?	9
5) Difference between method overloading and method overriding in java ?	9
6) Difference between abstract class and interface ?	10
7) Why java is platform independent?	10
8) What is method overloading in java ?	10
9) What is difference between c++ and Java ?	10
10) What is JIT compiler ?	10
11) What is bytecode in java ?	10
12) Difference between this() and super() in java ?	11
13) What is a class ?	11
14) What is an object ?	11
15) What is method in java ?	11
16) What is encapsulation ?	11
17) Why main() method is public, static and void in java ?	12
18) Explain about main() method in java ?	12
19) What is constructor in java ?	12
20) What is difference between length and length() method in java ?	12
21) What is ASCII Code?	12
22) What is Unicode ?	13
23) Difference between Character Constant and String Constant in java ?	13
24) What are constants and how to create constants in java?	13
25) Difference between '>>' and '>>>' operators in java?	13
Core java Interview questions on Coding Standards	13
26) Explain Java Coding Standards for classes or Java coding conventions for classes?	13
27) Explain Java Coding standards for interfaces?	13

Java 8 generics interview questions. Generics in java interview questions and answers for experienced. Java generics interview questions for experienced. Generic interview questions in java.

Java - Generics - Interview Questions Java generics was first introduced into the Java programming language in J2SE 5.0. Generics extends the Java type capabilities by enabling a Java type or method to operate on objects of different types. Generics also provides compile time safety, by identifying invalid types and throwing errors at compile time. Important keywords are provided at the end of the questions. Review them, make them a part of Java generics vocabulary, and talk about them confidently during your interview process. FAQKey ConceptGenerics in Java programming language enable Java types, i.e. classes and interfaces, to be declared as parameters to classes, interfaces and methods. Generics provide a way to reuse the same code with different inputs, i.e. different types. Code that uses generics has many advantages over code that is non-generic. Compile time type checks - The Java compiler applies type checking to generic code at compile time and throws errors for type safety violations. Eliminates implicit casting - Java code that uses generics do not need explicit casting, where as the code that is non-generic requires explicit casting. Implementation of generic algorithms - By using generics, programmers can develop generic algorithms designed to work on collections of different types that are type safe and easier to use. FAQKey ConceptA generic type is a generic class or interface that is parameterized over types. Declaration of generic types - A generic class is declared using the format 'class MyClass [...]', The angle brackets is the type parameter section and specifies the type parameters T1, T2, ... for the generic class. Instantiation of generic types - You instantiate a generic class using the new keyword as usual, but pass actual types within the parameter section. Example - 'MyClass myClass = new MyClass()'. In Java 7 and later you can eliminate the type and just have the angle brackets. Example - 'MyClass myClass = new MyClass()'. The empty angular brackets syntax is commonly referred to as the Diamond. FAQKey ConceptGeneric methods are methods that are declared with type parameters. Generic methods can be static, non-static or constructors. Declaration of generic methods - Instantiation of generic methods FAQKey ConceptBounded type parameters enable you to restrict the types that you can use as arguments for a parameterized type. For example if a method acts only on numbers, then you can use bounded parameters to specify that the method accepts only instances of Number or its sub-classes. FAQKey ConceptSimilar to regular classes and interfaces, you can create sub-types of generic classes or interfaces by extending or implementing from the generic classes or interfaces. For example, in Java collections API, ArrayList implements List and List implements Collections. The sub-type relation is preserved as long as the type argument does not vary. So, ArrayList implements List and List implements Collections. Java Interview Guide has over 250 REAL questions from REAL interviews. Get the guide for \$15.00 only. BUY EBOOK FAQKey ConceptGenerics are applied at compile time provider stronger type checks. Once the type checks are complete, the compiler erases the type check code so that generics do not incur runtime overhead.\*\*\* See complete answer in the Java Interview Guide. FAQKey ConceptNo Java generics cannot be applied to primitive types.\*\*\* See complete answer in the Java Interview Guide. FAQKey ConceptNo you cannot create instances of generic type parameters.\*\*\* See complete answer in the Java Interview Guide. FAQKey ConceptThe question mark (?) is termed as wildcard in generics code.\*\*\* See complete answer in the Java Interview Guide. Java Interview Guide has over 250 REAL questions from REAL interviews. Get the guide for \$15.00 only. BUY EBOOK Important Keywords to Remember Generics Generic types Bounded wildcards Unbounded wildcards Type erasure BUY EBOOK SSL Secure Payment Generics Interview Questions are generally used to judge the familiarity of interviewee with the latest concepts in Java. Introduced in Java 5, Generics add a great deal of flexibility to Java. In this guide, we look at important interview questions related to Generics - How to create a Generic class, method & we will discuss other important things about Generics. Generics are used to create Generic Classes and Generic methods which can work with different Types (Classes). Consider the class below: class MyList { private List values; void add(String value) { values.add(value); } void remove(String value) { values.remove(value); } } MyList can be used to store a list of Strings only. MyList myList = new MyList(); myList.add("Value 1"); myList.add("Value 2"); To store integers, we need to create a new class. This is problem that Generics solve. Instead of hard-coding String class as the only type the class can work with, we make the class type a parameter to the class. Example with Generics Let's replace String with T and create a new class. Now the MyListGeneric class can be used to create a list of Integers or a list of Strings class MyListGeneric { private List values; void add(T value) { values.add(value); } void remove(T value) { values.remove(value); } T get(int index) { return values.get(index); } } MyListGeneric myListString = new MyListGeneric(); myListString.add("Value 1"); myListString.add("Value 2"); MyListGeneric myListInteger = new MyListGeneric(); myListInteger.add(1); myListInteger.add(2); Note the declaration of values. Instead of T, we can use any valid identifier. class MyListGeneric If a generic is declared as part of class declaration, it can be used anywhere a type can be used in a class - method (return type or argument), member variable etc. For Example: See how T is used as a parameter and return type in the class MyListGeneric. In MyListGeneric, Type T is defined as part of class declaration. Any Java Type can be used as a type for this class. If we would want to restrict the types allowed for a Generic Type, we can use a Generic Restrictions. Consider the example class below: In declaration of the class, we specified a constraint "T extends Number". We can use the class MyListRestricted with any class extending (any sub class of) Number - Float, Integer, Double etc. class MyListRestricted { private List values; void add(T value) { values.add(value); } void remove(T value) { values.remove(value); } T get(int index) { return values.get(index); } } MyListRestricted restrictedListInteger = new MyListRestricted(); restrictedListInteger.add(1); restrictedListInteger.add(2); String not valid substitute for constraint "T extends Number". //MyListRestricted restrictedStringList = // new MyListRestricted(); //COMPILER ERROR In MyListGeneric, Type T is defined as part of class declaration. Any Java Type can be used as a type for this class. If we would want to restrict the types allowed for a Generic Type, we can use a Generic Restrictions. In declaration of the class, we specified a constraint "T super Number". We can use the class MyListRestricted with any class that is a super class of Number class. A generic type can be declared as part of method declaration as well. Then the generic type can be used anywhere in the method (return type, parameter type, local or block variable type). Consider the method below: static X doSomething(X number){ X result = number; //do something with result return result; } The method can now be called with any Class type extend Number. Integer i = 5; Integer k = doSomething(i); If you loved these Questions, you will love our PDF Interview Guide with 400+ Questions. Download it now! 400+ Interview Questions in 4 Categories: Java : Core Java, Advanced Java, Generics, Exception Handling, Serialization, Threads, Synchronization, Java New Features Frameworks : Spring, Spring MVC, Struts, Hibernate Design : Design, Design Patterns, Code Review Architecture : Architecture, Performance & Load Testing, Web Services, REST Web Services, Security, Continuous Integration Question 1. What Are Generics? Answer :Generics are used to create Generic Classes and Generic methods which can work with different Types (Classes). Question 2. What Are Advantages Of Using Generics? Answer :Advantage of Java Generics: There are mainly 3 advantages of generics. They are as follows: Type-safety: We can hold only a single type of objects in generics. It doesn't allow to store other objects. Type casting is not required: There is no need to typecast the object. Before Generics, we need to type cast. List list = new ArrayList(); list.add("hello"); String s = (String) list.get(0); //typecasting After Generics, we don't need to typecast the object. List list = new ArrayList(); list.add("hello"); String s = list.get(0); Compile-Time Checking: It is checked at compile time so problem will not occur at runtime. The good programming strategy says it is far better to handle the problem at compile time than runtime. List list = new ArrayList(); list.add("hello"); list.add(32); //Compile Time Error Adv Java Interview Questions Question 3. If The Compiler Erases All Type Parameters At Compile Time, Why Should You Use Generics? Answer :You should use generics because: The Java compiler enforces tighter type checks on generic code at compile time. Generics support programming types as parameters. Generics enable you to implement generic algorithms Question 4. Write A Generic Method To Exchange The Positions Of Two Different Elements In An Array. Answer :public final class Algorithm { public static void swap(T[] a, int i, int j) { T temp = a[i]; a[i] = a[j]; a[j] = temp; } } Adv Java Tutorial Question 5. Will The Following Class Compile? If Not, Why? public Final Class Algorithm { Public Static T Max(t X, T Y) { Return X > Y ? X : Y; } } Answer :No. The greater than (>) operator applies only to primitive numeric types. J2EE Interview Questions Question 6. What Is The Following Class Converted To After Type Erasure? Public Class Pair { Public Pair(K Key, V Value) { This.key = Key; This.value = Value; } Public K Getkey(); } Return Key; } Public V Getvalue(); } Return Value; } Public Void Setkey(K Key) { This.key = Key; } Public Void Setvalue(V Value) { This.value = Value; } Private K Key; Private V Value; } Answer :public class Pair { public Pair(Object key, Object value) { this.key = key; this.value = value; } public Object getkey() { return key; } public void setkey(Object key) { this.key = key; } public void setvalue(Object value) { this.value = value; } private Object key; private Object value; } Question 7. What Is The Following Method Converted To After Type Erasure? public Static > Int Findfirstgreaterthan(int[] A, T Elem) { // ... } Answer :public static int findFirstGreaterThan(Comparable[] at, Comparable elem) { // ... } J2EE Tutorial Core Java Interview Questions Question 8. Will The Following Method Compile? If Not, Why? public Static Void Print(list List) { For (number N : List) System.out.println(n + ""); System.out.println(); } Answer :Yes. Question 9. Write A Generic Method To Find The Maximal Element In The Range [begin, End) Of A List. Answer :import java.util.\*; public final class Algorithm { public static
